

# Approved Skills and Procedures for Certified EMS Providers

**EMS Scope of Practice Guidance** - In general EMS scope of practice includes: 1) Environment of practice (RCW 18.73.030)(10)(12), (WAC 246-976-182); 2) Medical Direction (RCW 18.71, 18.73), (WAC 246-976-182, 246-976-144); 3) Training, skills and procedures (RCW 18.73.081), (WAC 246-976-182); and 4) EMS service affiliation (RCW 18.73), (WAC 246-976-182). Certified EMS providers are authorized to provide care under the authority of the EMS county Medical Program Director (MPD), in a pre-hospital emergent environment unless participating in CARES programs authorized under RCW 35.21.930 or with recognized Emergency Medical Services Supervisory Organizations (ESSOs) in accordance with RCW 18.73.081(10)(12). Certified EMS providers are authorized to perform skills and procedures listed in this guidance document if they have received training and a department approved MPD patient care protocol is in place. Other regulations may apply.

## Legend

**N- National** indicates the skill is listed in the interpretive guidelines of the National EMS Scope of Practice Model which defines the practice of EMS certified providers as a floor or minimum national standard. (National scope of practice)

**W- Washington Initial Training** indicates the skill is not listed in the interpretive guidelines of the National EMS Scope of Practice Model. However, Washington State Department of Health approves the skill to be in Washington State scope of practice and training for the skill is mandatory for inclusion in approved initial training and continuing education. (Not in national scope, required in all initial and continuing education).

**W\* - Washington Specialized Training Required** indicates the skill is approved for use by Department of Health certified EMS providers through specialized training as authorized by WAC 246-976-024. Certified EMS providers must have completed a department and MPD approved training course and demonstrated knowledge and skills competency to the level of satisfaction of the MPD. The MPD authorizes the skill through department approved MPD patient care protocols. (Not in national scope, MPD option to implement, and specialized training required).

**W\*\* - Washington State Endorsement on a Certification is Required** indicates the skill is approved for use by Department of Health certified EMS providers through specialized training as authorized by WAC 246-976-024. Certified EMS providers must have completed a department and MPD approved training course and demonstrated knowledge and skills competency to the level of satisfaction of the MPD. The MPD authorizes the skill through department approved MPD patient care protocols. The department requires a course application and approval for these skills and issues an endorsement to the provider's certification. The only authorized endorsements are EMT-IV and EMT-SGA. (Not in national scope, MPD option to implement, specialized training required, course application must be submitted and approved by the department, an endorsement added to the credential by department).

**Blank space** - If the space is blank, the skill is not authorized.

<b>Airway / Ventilation / Oxygenation</b>	<b>EMR</b>	<b>EMT</b>	<b>AEMT</b>	<b>PARA</b>
Airway - Nasal		N	N	N

OB - Assisted Complicated Delivery		N	N	N
OB - Assisted Normal Delivery	N	N	N	N
Ventricular Assist Devices (VAD) - May transport patients with VAD in place		W*	W*	N
<b>Vascular Access, Infusion, and Monitoring of Lines</b>	<b>EMR</b>	<b>EMT</b>	<b>AEMT</b>	<b>PARA</b>
Central Venous Line - Access Existing Line / Port for Infusion				N
Central Venous Line Insertion and Infusion – Subclavian				W*
External Jugular Insertion and Infusion - Adult				W*
Intraosseous Insertion and Infusion - Adult and Pediatric		W**	N	N

Operation and Management of a Controlled Delivery Device for IV Infusion (IV Pump)				N
Peripheral IV Insertion and Infusion - Adult and Pediatric		W**	N	N
Venipuncture to obtain venous blood sample		W**	N	N
<b>Technique of Medication Administration</b>	<b>EMR</b>	<b>EMT</b>	<b>AEMT</b>	<b>PARA</b>
Access indwelling catheters and implanted central IV ports				N
Buccal / Mucosal / Sublingual	W*	N	N	N
Endotracheal				N
Inhalation - Aerosolized/nebulized - EMT, limited to anticholinergics and beta agonist/bronchodilator.		N	N	N
Inhalation - Nitrous Oxide		W*	N	N
Inhalation - Unit-dosed, premeasured - EMR, limited to assisting patients with own prescribed medications such as bronchodilator for chronic respiratory condition.	W*	N	N	N
Intradermal				N
Intramuscular - Auto Injector	N	N	N	N
Intramuscular - Syringe and needle - Draw medication using a needle from a vial into a syringe.		W*	N	N
Intranasal			N	N
Intranasal - Mucosal atomization device	N	N	N	N
Intranasal - Unit-dosed, premeasured	N	N	N	N
Intraosseous		W**	N	N
Intravenous		W**	N	N
Nasogastric				N
Ophthalmic				W*
Oral - per os (PO) - EMR (limited to aspirin and glucose)	W*	N	N	N
Oral - per os (PO) - EMT (limited to aspirin, glucose, assist with patient's prescribed nitroglycerine, ondansetron and OTC analgesics (ibuprofen and acetaminophen) for pain or fever.		N	N	N
Oral - per os (PO) - AEMT (limited to aspirin, glucose, nitroglycerine, ondansetron, and OTC analgesics ibuprofen and acetaminophen for pain or fever)			N	N
Otic				W*
Rectal (EMT and AEMT limited to acetaminophen)		W*	W*	N
Subcutaneous			N	N
Topical				N
Transdermal				N
<b>Medications - General Guidance</b>	<b>EMR</b>	<b>EMT</b>	<b>AEMT</b>	<b>PARA</b>
Administration of Controlled Substances (FDA Scheduled)				N
Activated Charcoal		W*	N	N
Analgesic OTC for pain or fever		N	N	N
Antidotes for chemical / hazardous material / nerve agent exposures (auto-injector)	N	N	N	N
Aspirin - Oral	W*	N	N	N
Assisting a patient with his/her own prescribed medications (aerosolized/nebulized)	W*	N	N	N
Benzodiazepines for Sedation				N
Benzodiazepines for Seizures				N
Blood or Blood Products - Initiation / administration				W*

Blood or Blood Products - Maintenance of pre-existing infusion				N
Bronchodilator / Beta Agonist - Metered Dose Inhaler	W*	N	N	N
Bronchodilator / Beta Agonist - Nebulizer (EMT limited to anticholinergics and beta agonist/bronchodilator)		N	N	N
Depolarizing Agents for Pharmacological Facilitation of Intubation				N
Diphenhydramine (AEMT limited to IV, PO, IM with specialized training)		W*	W*	N
Diphenhydramine EMT (limited to PO with specialized training)		W*	W*	N
Emergency Cardiac Medications (AEMT limited to Epinephrine for cardiac arrest)			W*	N
Epinephrine (auto-injector) for anaphylaxis (supplied and carried by EMS agency or patients).	W	N	N	N
Epinephrine for Anaphylaxis Intramuscular - Syringe and Needle		W*	N	N
Expanded use of OTC medications - oral / topical				N
Glucose for hypoglycemia - Oral	W*	N	N	N
Hypoglycemic Medications (EMT with IV Endorsement - D10 )		W*	N	N
Hypoglycemic Medications (Glucagon)		W*	N	N
Hypoglycemic Medications (i.e. Glucagon, D50)			N	N
Monoclonal antibodies for COVID-19 (See General Guidance Section)			W*	W*
Naloxone for Suspected Opiate / Narcotic Overdose - Intranasal - Mucosal Atomization Device or autoinjector	N	N	N	N
Naloxone for Suspected Opiate / Narcotic Overdose Intramuscular - Syringe and Needle		W*	N	N
Naloxone for Suspected Opiate / Narcotic Overdose Intravenous			N	N
Nitroglycerine - Intravenous				N
Nitroglycerine - Sublingual (EMT limited to assist with patients prescribed nitroglycerine)		N	N	N
Nitroglycerine - Transdermal				N
Nitrous Oxide		W*	N	N
Non-depolarizing Agents for Pharmacological Facilitation of Intubation				N
Ondansetron (AEMT IV, IM, PO)			N	N
Ondansetron (EMT limited to PO)		W*	N	N
Opioid antagonist for suspected opioid overdose (auto-injector)	N	N	N	N
Other medications to facilitate sedation (I.E. Ketamine, Etomidate)				N
Oxygen Therapy	N	N	N	N
Oxymetazoline		W*	W*	N
Thrombolytic (Initiation and Maintenance)				N
Vaccine for Influenza and COVID-19 (See General Guidance Section)		W*	W*	W*

### General Guidance

Authorized medications and routes for EMR, EMT, and AEMT are identified in this document. All medication administration requires a protocol to be established by the MPD and approved by the department for the level of certification indicated.

Authorized medications and routes for paramedic personnel are identified in this document. Additional medications may be approved for paramedic personnel if a department-approved MPD protocol is in place and providers have completed department-approved MPD supplementary training on the medication and protocol.

Administration of purified protein derivative (PPD) - People who have taken a PPD administration course administered by a local health agency may administer PPD if: the person is doing so in accordance with a formal TB program through the local health agency; is under the medical oversight of the local health officer, and is not doing so while performing as an EMS provider.

Administration of vaccine – EMT, AEMT and paramedic may administer vaccine for influenza and COVID-19 in adult and pediatric populations in a declared emergency when all of the following exist: 1) there is a local or state declaration of an emergency under the provisions of chapter 38.52 RCW; 2) EMS personnel have completed any MPD-approved specialized training and have received approval from the MPD to perform the skill. 3)The EMS personnel are acting under the medical oversight and direction of a county MPD or MPD delegate physician such as the local health officer and a department approved MPD protocol is in place. 4) The EMS personnel are affiliated with a licensed EMS service, and the EMS service is coordinating the activity with appropriate organizations authorized to conduct the community surveillance of infectious disease. 5) The vaccines are managed in accordance with applicable local, state, and federal requirements.

Conducting nasopharyngeal swabbing for COVID-19 – EMT, AEMT and paramedic may conduct nasal swab testing for COVID-19 in a declared emergency when all of the following exist: 1) there is a local or state declaration of an emergency under the provisions of chapter 38.52 RCW; 2) EMS personnel have completed any MPD-approved specialized training and have received approval from the MPD to perform the skill. 3)The EMS personnel are acting under the medical oversight and direction of a county MPD or MPD delegate physician such as the local health officer and a department approved MPD protocol is in place. 4) The EMS personnel are affiliated with a licensed EMS service, and the EMS service is coordinating the activity with appropriate organizations authorized to conduct the community surveillance of infectious disease. 5) The nasopharyngeal swabbing processes are managed in accordance with applicable manufacture, local, state, and federal requirements.

AEMT and Paramedics may administer monoclonal antibodies for COVID-19 in a declared emergency when all of the following exist: 1) there is a local or state declaration of an emergency under the provisions of chapter 38.52 RCW; 2) EMS personnel have completed any MPD-approved specialized training and have received approval from the MPD to perform the skill. 3)The EMS personnel are acting under the medical oversight and direction of a county MPD or MPD delegate physician such as the local health officer and a department approved MPD protocol is in place. 4) The EMS personnel are affiliated with a licensed EMS service, and the EMS service is coordinating the activity with appropriate organizations authorized to conduct the community surveillance of infectious disease. 5) The medications are managed in accordance with applicable manufacture, local, state, and federal requirements. 6) Quality assurance activities in accordance with their department approved MPD quality assurance plan is conducted by the MPD.

EMT personnel may use manual cardiac defibrillators in place of an AED for cardiopulmonary resuscitation provided the equipment is in AED mode.

### **Inter-Facility Specific Devices and Procedures**

Inter-facility transport of patients must occur with a level of care recommended by the sending physician. Clarification on common devices and procedures not routinely seen by certified EMS personnel in the pre-hospital setting is provided below.

EMT and higher-level providers may transport medical devices and equipment that can be managed by the patient or patient's caregiver while in transport and require no medical intervention or monitoring from the EMS provider if authorized by the MPD. Examples include but are not limited to: Peg tubes, J tubes, CSF shunts, ileostomy bags, insulin pumps, and feeding tubes that are not running during transport.

EMT personnel may transport patients with a pre-established saline lock or peripheral IV gravity fed infusion of normal saline, dextrose or lactated ringers or a combination of these solutions when: it has been determined by the sending physician to be a BLS level transport and a department approved MPD protocol is in place. EMTs are not authorized to establish an IV unless the EMT holds an endorsement for IV therapy. Transport of this equipment is limited to monitoring only and is optional for the MPD to implement.

EMT personnel may transport patients with a pre-established long term vascular access device such as a central line, PICC line, subcutaneous infusion, epidural with a patient controlled analgesia device when: it has been determined by the sending physician to be BLS-level transport and the EMT has successfully completed a department approved MPD specialized training course, and a department approved MPD protocol is in place. Transport of this equipment is limited to monitoring only and is optional for the MPD to implement.

Paramedic personnel may transport patients with medications infusing if a department-approved MPD protocol is in place and providers have completed department-approved MPD supplementary training on the medication and protocol. MPDs may establish a generic protocol to address uncommon medications presented in urgent cases where a specific protocol does not exist. The generic protocol must include just-in-time training requirements, information the paramedic must have about the medication prior to transport, any additional transport considerations, any required contact with medical control, and any CQI requirements for uncommon medications.

Paramedic personnel may transport patients determined by the sending physician as requiring care of a specially trained paramedic and/or nurse as long as the provider has successfully completed a department-approved MPD specialized training course, and department-approved MPD inter-facility protocols within scope addressing the skills, procedures, and medications are in place.

Paramedic personnel may transport patients determined by the sending physician as requiring oxygen therapy - high flow nasal cannula. High-flow nasal cannula (HFNC) oxygen therapy comprises an air/oxygen blender, an active humidifier, a single heated circuit, and a nasal cannula. It delivers adequately heated and humidified medical gas at up to 60 L/min of flow and is considered to have several physiological effects: reduction of anatomical dead space, PEEP effect, constant fraction of inspired oxygen, and good humidification. Paramedics should complete training and a department approved MPD inter-facility protocols within scope addressing skills and procedures is in place. The above therapy does not refer to passive oxygenation via high flow nasal cannula during CPR and emergent airway procedures (apneic oxygenation), which can be performed by all levels of EMT following local protocol.
