Some reportable vs non-reportable clarifications:

Basal cell carcinomas and squamous cell carcinomas of the skin are not reportable, except when they are diagnosed in the labia, clitoris, vulva, prepuce, penis, anus (C210-C211) or scrotum; i.e., *the primary site is not (C44._)*. Basal and squamous cell carcinomas are reportable if they are located on the vermilion/vermillion border, lip, frenulum, commissure and/or other mucosal surfaces. Please refer to the SEER Program Coding and Staging Manual and/or SINQ

*Pilocytic/juvenile astrocytoma should be reported as 9421/3.

**Carcinoid, NOS of the appendix (8240/3) is reportable. As of 01/01/2015, the ICD-O-3 behavior code changed from /1 to /3

***Refer to Case Reportability Instructions in the SEER Hematopoietic and Lymphoid Database. The rules, guidelines, and the Hematopoietic Database follow the *World Health Organization (WHO) Classification of Tumours of Haematopoietic and Lymphoid Tissues. 4th ed.*

**** The exceptions are microscopic thymoma or thymoma benign (8580/0), micronodular thymoma with lymphoid stroma (8580/1), and ectopic hamartomatous thymoma (8587/0).

Reportable Ambiguous Terms	Non-reportable Ambiguous Terms
Apparent(ly)	Cannot be ruled out
Appears	Equivocal
Comparable with	Possible
Compatible/Compatible with	Potentially malignant
Consistent with	Questionable
Favor(s)	Rule out
Malignant appearing	Suggests
Most Likely	Worrisome
Presumed	
Probable	
Suspect(ed)	
Suspicious (for)	
Typical (of)	

Note: If the cytology is reported using any of these ambiguous terms and neither a positive biopsy nor a physician's clinical impression supports the cytology findings, do not consider as diagnostic of cancer.

Note: Do not substitute synonyms such as “supposed” for “presumed” or “equal” for “comparable.” Do not substitute “likely” for “most likely.” Use only the exact words on the list.
