COVID-19 and Vaccination

American College of Obstetricians and Gynecologists (ACOG, 2021), and the Centers for Disease Control and Prevention (CDC, 2021b, 2021c) have recommended that all women of childbearing age should be vaccinated against COVID-19. Vaccination is safe and effective for pregnant women and breastfeeding mothers. It is also recommended for individuals with a history of allergies, including those with a history of food allergies.

Vaccines are considered safe and effective for pregnant women. There have been no reports of serious side effects in pregnant women who have received COVID-19 vaccines. However, pregnant women should discuss the benefits and risks of vaccination with their healthcare provider. It is important to note that there is currently no vaccine for COVID-19 that is approved for use in pregnancy.

It is recommended that pregnant women who are vaccinated against COVID-19 continue to practice good hygiene, including regular handwashing and wearing masks, to reduce the risk of transmission. Pregnant women who have received the COVID-19 vaccine should continue to follow all guidance from healthcare providers and public health officials.

The American College of Obstetricians and Gynecologists (ACOG) and the Centers for Disease Control and Prevention (CDC) have issued guidelines for pregnant women who have received the COVID-19 vaccine. These guidelines recommend that pregnant women continue to follow all guidance from healthcare providers and public health officials.

It is important to note that there is currently no vaccine for COVID-19 that is approved for use in pregnancy. Pregnant women should discuss the benefits and risks of vaccination with their healthcare provider.
