

testandgo™ KIOSKS

**No Cost
COVID-19 and Flu Testing**

A kiosk for tests? YES!

Testandgo™ makes it possible to access a test at the push of a button in a conveniently located kiosk.

Kiosks can dispense free COVID-19 rapid antigen, multiplex rapid antigen tests (which detect Flu A+B and COVID-19), and self-swab PCR tests.

They can also include other health care supplies such as Naloxone, pregnancy tests, STI tests, fentanyl test strips, and over-the-counter medications/products.

Rapid testing is part of our new normal

Washington State Department of Health is partnering with Long View International Technology Solutions (LTS) to offer Local Health Jurisdictions and Tribes fully automated testandgo™ kiosks.

Convenience of a kiosk

- Each kiosk can hold around 700 tests depending on configuration.
- Kiosks will have a minimum of 50% of their capacity allocated to COVID-19 and flu tests. (DOH pays for all COVID-19 and flu tests.)
- Any additional products added are the responsibility of the LHJ or Tribe. If no other products exist, kiosks will be filled with COVID-19 and flu tests.
- LTS will perform a site visit to ensure site safety and accessibility.

Where's the best location for a one-stop destination for tests?

Malls, community colleges, pharmacies, libraries and community centers...

You know the best location for your community. LTS will make sure your site is accessible and well-suited for a testandgo™ kiosk.

Breaking down barriers to access

By providing 24/7 access, you can reduce doctor visits, lowering barriers for underserved populations.

Live support in multiple languages is available through the LTS patient portal.

General site specifications

Adequate space to accommodate kiosk:

- 75" tall, 38.5" wide, and 37" deep.
