

## Soil and Toy Screening Intake Form

Please complete this form and include it when you drop off a soil sample or toy for screening or when mailing in a sample. Use a separate form for each item.

Please note that results of the screening are dependent on the method used to collect the sample, the location where the sample was taken, and several other factors. Laboratory testing is often more precise and should be used if there are significant concerns. If a child has been identified with an elevated blood lead level, please contact the local health department directly for guidance.

Full Name:	
Child Care Name:
