<sup>a</sup> *Enterobacter*, *Citrobacter*, and *Serratia* may develop resistance during therapy with 3rd generation cephalosporins.<sup>b</sup> Cefepime Susceptible dose-dependent were not included in % susceptible. Susceptible dose-dependent isolates are found in 4% *E. cloacae* complex, 3% *K. oxytoca*, 3% *S. marcescens*, 4% *E. coli*, 8% *K. pneumoniae*, and 4% *P. mirabilis*.<sup>c</sup> Number of *H. influenzae* tested was insufficient for antibiogram threshold. % susceptible was inferred from 2019 antibiogram data.<sup>d</sup> This number includes clinical CF isolates only. All isolates were included / No duplicate checking. Numbers are decreased compared to last year due to new testing policy.<sup>e</sup> The 7% Trim-Sulfa NON-susceptible isolates were all from CF specimens.
