**TO:** House Capital Budget  
Senate Capital Budget  
Myra Baldini, Office of Financial Management

**FROM:** Holly Myers, Director  
Office of Drinking Water  
Department of Health

**SUBJECT:** Summary of State Fiscal Year 26 Drinking Water State Revolving Fund Loan Funding Cycle

The Department of Health's Drinking Water State Revolving Fund (DWSRF) program accepted construction loan applications last year during the annual application cycle that closed November 30, 2025. The DWSRF program identified funding of \$177 million for construction projects this cycle. The maximum award per jurisdiction is \$15 million, unless additional funding is available and approved by the DWSRF leadership team. The standard interest rate for loans for construction projects is 2.25 percent with a 1.0 percent loan service fee and twenty-year loan term. Loan fees are waived for projects receiving subsidy as a disadvantaged community or as required by law for projects addressing emerging contaminants.

The DWSRF accepted Planning and Engineering loan applications last year with projects being reviewed and prioritized in May and December. Standard interest rate for planning and engineering loans is 0 percent interest with a 2.0 percent loan service fee and ten-year loan term.

Eligibility for construction funding requires all DWSRF construction and emerging contaminant loan applicants to have an approved Water System Plan (WSP), a Small Water System Management Program (SWSMP), or plan amendment containing the proposed DWSRF project (WAC 246-296-100).

We are currently awarding subsidy for up to 75 percent of the total project cost to water systems that meet the definition of "disadvantaged communities" in [WAC 246-296-020](#). The rule and accompanying guidance [DWSRF Construction Loan Guidance](#) ensure Washington can effectively leverage the total amount of federal funding available. Current federal rules additionally require 100 percent subsidy for projects addressing emerging contaminants and funded under the Bipartisan Infrastructure Law Emerging Contaminant (BIL-EC) grant.

We received forty-six (46) construction loan applications requesting over \$220 million, including \$53.5 million in applications for projects addressing emerging contaminants. Twenty-one (21) project applications qualified for potential subsidy as disadvantaged communities. Final subsidy awards are pending the acceptance of awards. The two (2) highest ranking projects addressing emerging contaminants are fully or partially funded through the \$17.5 million available in BIL-EC funding. Forty (40) projects are offered funding under the regular construction loan framework or through other federal funding sources.

We reviewed all projects for eligibility and scored applications based on the health risk addressed by the proposed project. Two construction projects totaling over \$15 million were determined to be ineligible for funding, due to lack of approved planning documents. We are working with several other water systems to address fiscal challenges that may impact their eligibility.

We also received \$2.6 million in Planning and Engineering project applications. We propose funding \$1.7 million out of the Planning and Engineering loan funding and fund the remaining applications using other DWSRF sources.

The list below includes construction and planning and engineering projects we will fund, as well as those that were withdrawn or deemed ineligible for funding, based on the information available to date. We currently propose to fund the entire list of eligible construction projects of just over \$155 million.

All loans are pending underwriting and contract acceptance by the applicant, and the final projects list will be included in the Intended Use Plan submitted to the Environmental Protection Agency (EPA) as part of the annual DWSRF grant applications.

Construction Applications									
App. ID	Applicant or Water System Name	Project Name	PWSID	County	Final Score	Loan/Grant Request	Loan Fee	Loan/Grant Award	Subsidy Eligible (yes/no)
