Patient Characteristics

NOTE: This algorithm does not include the work-up for bacterial pathogens.

NOTES:

- * If negative, consider adding Giardia Antigen test because of greater sensitivity.
- ** Collect every other day or 3 samples over 10 days
- *** Perform O&P exam to look for Cyclospora and Isospora. Some labs perform at same time as Cryptosporidium
- **** For < 5 years old, consider ordering Rotavirus antigen as part of initial work up
- # Additional tests that less commonly need to be performed as guided by detailed patient history. Not all tests listed in the"box" may be relevant for a particular patient.
