

Eliza Island

Annual Shellfish Growing Area Review

Prepared By: Michael Ulrich

Area: Eliza Island

Year Ending: December 31, 2023

Classification: Approved

Activities in the Growing Area in 2023

The growing area was only sampled five times during the year due to boat mechanical issues during October. This sample event will be made up for in 2024. A routine three-year shoreline evaluation and a routine shoreline survey were conducted. No Direct or Indirect Impacts were identified.

Analytical Results of Water Samples

Table 1 summarizes the results of the last 30 samples collected from the area. This summary shows that all stations pass the NSSP water quality standard.

Change in Actual Pollution Sources that Impact the Growing Area

We currently have no information indicating that the area has new sources of pollution.

Classification Status

- Well within the classification standards
- Meets standards, but threatened with downgrade in classification
- Fails to meet current classification standards

Remarks and Recommendations

Table 1 shows that all stations meet the NSSP water quality standard for an Approved classification and the area is correctly classified.

TABLE 1. Summary of Marine Water Data (SRS) for the Eliza Island Growing Area

Sampling Event Type: Regulatory

Maximum Number of Samples: 30

Tides Included: All

Station Number	Classification	Date Range	Range (FC/100mL)	Geomean (FC/100mL)	Est. 90 th Percentile (FC/100mL)	Meets Standard
61	Approved	9/19/2018 - 12/12/2023	1.7 - 49.0	2.0	4.5	Y
62	Approved	9/19/2018 - 12/12/2023	1.7 - 130.0	2.2	7.2	Y

The standard for approved shellfish growing waters is fecal coliform geometric mean not greater than 14 organisms/ 100 mL with an estimated 90th percentile not greater than 43 organisms/ 100 mL. The above table shows bacteriological results in relation to program standards.
