

Eliza Island

Annual Shellfish Growing Area Review

Prepared By: Casey Deligeannis

Area: Eliza Island

Year Ending: December 31, 2021

Classification: Approved

Activities in the Growing Area in 2021

The growing area was sampled a minimum of six times in accordance with National Shellfish Sanitation Program (NSSP) Systematic Random Sampling (SRS) criteria. No additional activities have been documented in the growing area.

Analytical Results of Water Samples

Table 1 summarizes results of the last 30 most recent samples collected from the area. This summary shows that all stations meet the NSSP water quality standard.

Change in Actual Pollution Sources that Impact the Growing Area

We currently have no information indicating that the growing area has new sources of pollution.

Classification Status

- Well within the classification standards
- Meets standards, but some concerns
- Meets standards, but threatened with downgrade in classification
- Fails to meet current classification standards

Remarks and Recommendations

Table 1 shows that all stations in the growing area meet NSSP water quality standard for an Approved classification and the area is correctly classified

TABLE 1. Summary of Marine Water Data (SRS) for the Eliza Island Growing Area

Sampling Event Type: Regulatory

Maximum Number of Samples: 30

Tides Included: All

Station Number	Classification	Date Range	Range (FC/100mL)	Geomean (FC/100mL)	Est. 90 th (FC/100mL)	Meets Standard
61	Approved	11/9/2016 - 12/14/2021	1.7 - 49.0	2.0	4.4	Y
62	Approved	11/9/2016 - 12/14/2021	1.7 - 130.0	2.3	7.6	Y

The standard for approved shellfish growing waters is fecal coliform geometric mean not greater than 14 organisms/ 100 mL with an estimated 90th percentile not greater than 43 organisms/ 100 mL. The above table shows bacteriological results in relation to program standards.
