## **Jamestown**

# Annual Shellfish Growing Area Review

Prepared By: Liz Maier

Area: Jamestown

Year Ending: December 31, 2023

Classification: Approved

### **Activities in the Growing Area in 2023**

The growing area was sampled six times in accordance with the National Shellfish Sanitation Program (NSSP) Systematic Random Sampling criteria. A routine three-year shoreline evaluation was completed, and Clallam County collected samples at four drainages. No new or changes in pollution sources were identified.

Clallam Conservation District received EPA National Estuary Program (NEP) funds through the Washington State Conservation Commission to provide technical assistance and education and outreach. Clallam County Environmental Health also received NEP funds to implement a pollution identification and correction project and to enhance their septic system operations and maintenance program in the Sequim Bay-Dungeness Watershed Clean Water District. The Clean Water Work Group continues to meet quarterly.

#### **Analytical Results of Water Samples**

Table 1 summarizes the results of the last 30 samples collected from the area. This summary shows that all stations pass the NSSP water quality standard.

### Change in Actual Pollution Sources that Impact the Growing Area

We currently have no information indicating that the area has new sources of pollution.

#### **Classification Status**

|   | Well within the classification standards                         |
|---|--|
|   | Meets standards, but threatened with downgrade in classification |
| П | Fails to meet current classification standards                   |

#### Remarks and Recommendations

Table 1 shows that all stations meet the NSSP water quality standard for an Approved classification and the area is correctly classified.

TABLE 1. Summary of Marine Water Data (SRS) for the Jamestown Growing Area

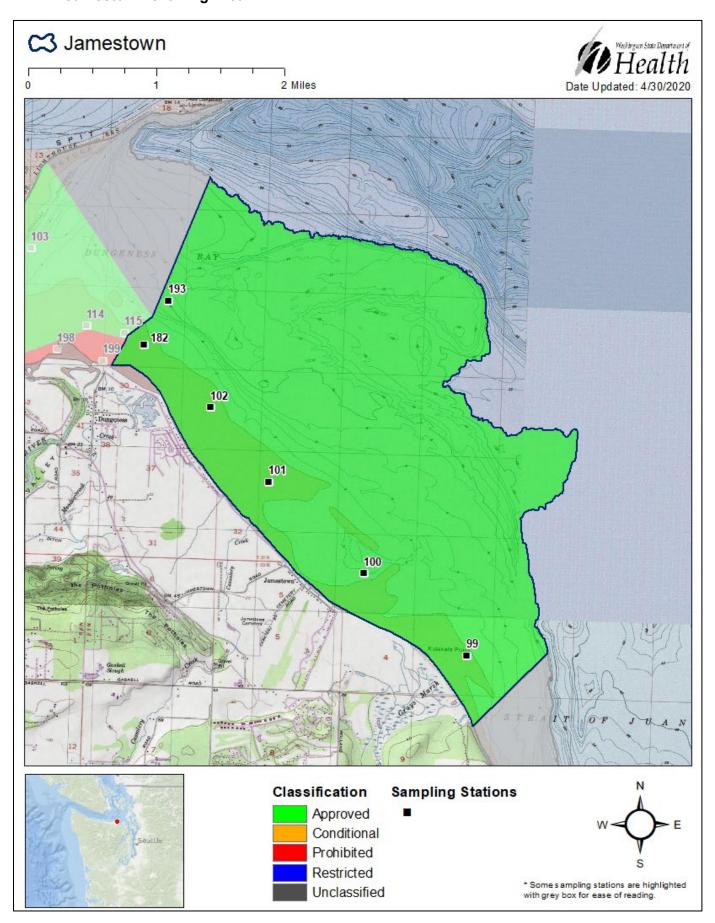

Sampling Event Type: Regulatory
Maximum Number of Samples: 30

Tides Included: All

| Station<br>Number | Classification | Date Range              | Range<br>(FC/100mL) | Geomean<br>(FC/100mL) | Est. 90 <sup>th</sup><br>Percentile<br>(FC/100mL) | Meets<br>Standard |
|-------------------|----------------|-------------------------|---------------------|-----------------------|---|-------------------|
| 99                | Approved       | 1/9/2019 - 11/28/2023   | 1.7 - 49.0          | 2.2                   | 5.8   | Υ                 |
| 100               | Approved       | 1/9/2019 - 11/28/2023   | 1.7 - 33.0          | 2.9                   | 8.2   | Υ                 |
| 101               | Approved       | 10/31/2018 - 11/28/2023 | 1.7 - 49.0          | 2.8                   | 9.1   | Υ                 |
| 102               | Approved       | 10/31/2018 - 11/28/2023 | 1.7 - 33.0          | 2.6                   | 7.0   | Υ                 |
| 182               | Approved       | 10/31/2018 - 11/28/2023 | 1.7 - 23.0          | 3.2                   | 11.3  | Y                 |
| 193               | Approved       | 10/31/2018 - 11/28/2023 | 1.7 - 33.0          | 2.0                   | 4.3   | Y                 |

The standard for approved shellfish growing waters is fecal coliform geometric mean not greater than 14 organisms/ 100 mL with an estimated 90th percentile not greater than 43 organisms/ 100 mL. The above table shows bacteriological results in relation to program standards
