

Makah Bay

Annual Shellfish Growing Area Review

Prepared By: Tim Jahraus

Area: Makah Bay

Year Ending: December 31, 2022

Classification: Approved, Prohibited

Activities in the Growing Area in 2022

The growing area was placed into the Inactive status in January 2020 due to lack of harvest activities. The Inactive status will end no later than January 2025. The growing area was sampled two times in accordance with National Shellfish Sanitation Program (NSSP) Systematic Random Sampling criteria. No additional activities were documented in the growing area.

Analytical Results of Water Samples

Table 1 summarizes the results of the last 30 samples collected from the area. This summary shows that all stations pass the NSSP water quality standard.

Change in Actual Pollution Sources that Impact the Growing Area

We currently have no information indicating that the area has new sources of pollution.

Classification Status

- Well within the classification standards
- Meets standards, but some concerns
- Meets standards, but threatened with downgrade in classification
- Fails to meet current classification standards

Remarks and Recommendations

Table 1 shows that all stations meet the NSSP water quality standard for an Approved classification and the area is correctly classified.

TABLE 1. Summary of Marine Water Data (SRS) for the Makah Bay Growing Area

Sampling Event Type: Regulatory

Maximum Number of Samples: 30

Tides Included: All

Station Number	Classification	Date Range	Range (FC/100mL)	Geomean (FC/100mL)	Est. 90 th Percentile (FC/100mL)	Meets Standard
201	Approved	7/20/2016 - 11/28/2022	1.7 - 33.0	3.0	9.3	Y
202	Approved	10/5/2016 - 11/28/2022	1.7 - 33.0	3.6	13.8	Y
203	Approved	8/17/2016 - 11/28/2022	1.7 - 49.0	3.9	16.5	Y
204	Approved	10/5/2016 - 11/28/2022	1.7 - 33.0	3.8	16.3	Y
200	Prohibited	10/5/2016 - 11/28/2022	1.7 - 240.0	12.5	110.2	N

The standard for approved shellfish growing waters is fecal coliform geometric mean not greater than 14 organisms/ 100 mL with an estimated 90th percentile not greater than 43 organisms/ 100 mL. The above table shows bacteriological results in relation to program standards.
