Table Notes:

1. Rates are the number of surgical site infections (SSI) divided by the number of similar surgical procedures during the year (infections per 100 procedures). Red colored cells indicate a statistically significant higher surgical infection rate, for that infection depth, than other Washington hospitals. White rate cells have infection rates similar to other hospitals. Light grey cells indicate hospitals do not report performing that type of surgical procedure. For facilities that performed less than 10 procedures in a procedure category, a meaningful rate could not be calculated so rates were not shown for these facilities.
2. Depth of infection classification:

Table of Surgical Site Infection Rates, by Type of Procedure and Depth of Infection, 2015^{1, 2, 3}

July 2019 download of January 2015 – December 2015 NHSN data

- a. The deep infection rate includes surgical wound infections occurring well below the skin and subcutaneous tissue, affecting muscles, organs, or bones (“deep incisional” and “organ/space” SSI per NHSN). Deep infections may be severe and can be difficult to treat often requiring antibiotics and a return visit to a hospital.
 - b. The total infection rate includes deep infections as well as shallow surgical wound infections occurring within the skin and subcutaneous tissue (“superficial incisional” SSI per NHSN). Shallow infections can be more easily treated, often without hospitalization and may not require antibiotics.
 - c. Note – Rates for deep and total infections from the same procedure type use the same denominator (number of procedures performed) during the reporting period.
3. Details of certain specific surgical procedure types are included in this table (coronary artery bypass graft procedures by incision sites and initial vs. revision joint replacement procedures). Hospitals are compared by their “overall” infection rates in these categories to compare Washington hospitals more accurately.
 4. Facility reported less than 12 months of SSI data during the data collection year. Facilities that reported less than 6 months of data were excluded from statistical significance calculations.
