Lab Results in WDRS

Lab reports often need to be entered into WDRS and users may upload the lab report itself to the system. The process varies by each program area in WDRS. Refer to the table below, and if you are unsure how to input a lab result, please contact the applicable program area.

Entering lab data into WDRS:

Program Area	Lab Results Tab	Uploading Lab Report	Question Package
Hepatitis	Required entry	Optional: Upload the lab report to the lab result itself (as shown below)	Lab information entered in the Lab Results tab auto-populates into the Laboratory Diagnostics question package
General Communicable Diseases (GCD)	Required entry	Upload the lab report to the lab result itself (as shown below)	Lab information entered in the Lab Results tab auto-populates into the case classification question package for auto-classified conditions
Tuberculosis	User choice	Attach the lab report to the Event Summary screen using the Attachment link (as shown below)	Required Entry into the Diagnostics and Evaluation question package
Blood Lead	User choice	Attach the lab report to the Event Summary screen using the Attachment link (as shown below)	

Program area contact information:

Program Area	Phone	Email
General Communicable Diseases	206-418-5500	CommDisEpi@doh.wa.gov
Hepatitis	B/D 206-418-5500 C 360-236-3390	B/D CommDisEpi@doh.wa.gov C Hepatitis@doh.wa.gov
Lead	360-236-4280	Lead@doh.wa.gov
Tuberculosis	360-236-3443	Tbservices@doh.wa.gov

Specimen collection date:	04/18/2018							
Test performed and result								
WDRS test performed:	IgM by Brucella microagglutination test (BMAT)							
WDRS test result, coded:	Brucella spp.							

The organization of the screen for the **Lab Results Tab** is the same for all program areas. Below the Event Summary section displayed at the top of the screen there are two sections: **Labs** (grid) and **Details**.

Labs

The Labs grid shows all individual laboratory result reports that have been received or entered for the event. Each specimen (not test result) is numbered consecutively. The grid displays the following information for each test:

- Lab number: internal numbering for specimen (1, 2, 3, ...)
- Specimen collection date
- WDRS specimen type
- WDRS test performed
- WDRS test result
- WDRS test result (additional)
- WDRS result summary

If the field begins with 'WDRS' it indicates that the field is standardized and can be used for reports entered manually or received through electronic laboratory reporting (ELR).

One specimen can have more than one test performed, each with a separate result. In addition, one specimen may be tested at more than one laboratory. In the example below, the first lab number was a stool specimen that had PCR performed identifying *Salmonella*. The same laboratory then did a bacterial culture identifying non-typhoidal *Salmonella*. The first and second test results share the same internal Lab number. The third lab result report was the first specimen (note the same collection date) forwarded to a reference laboratory for bacterial serotyping, which gave it a different internal Lab number. Finally, the follow-up stool sample taken on a later date is still positive for *Salmonella* by PCR.

Event Data	Lab Results	Concerns	Persons	Tasks	Surveys	Calendar	Event Properties	Ev
Labs								
Lab No.	Specimen collection date	WDRS specimen type	WDRS test performed	WDRS test result				
1	03/08/2018	Stool	PCR/Nucleic Acid Test (NAT,...	Salmonella spp. detected				
1	03/08/2018	Stool	Bacterial culture (isolation)	Salmonella non typhi				
2	03/08/2018	Isolate	Bacterial serotyping	Enteritidis				
▶3	03/19/2018	Stool	PCR/Nucleic Acid Test (NAT,...	Salmonella spp. detected				

Details

When the user highlights a result line on the Labs grid, as for the second result above, the **Details** section displays all data for that Lab number.

Labs		
Lab No.	Specimen collection date	WDRS specimen type
1	03/08/2018	Stool

WDRS result summary:	Positive

Electronic Lab Reporting (ELR)

Electronic lab reporting (ELR) will be fully incorporated into WDRS at a later date. Until that time, DOH will perform a daily import of General Communicable Diseases and Hepatitis labs from PHRED into WDRS. This daily import will involve some standardization of lab data including test type (WDRS test performed) and result (WDRS result coded and WDRS result summary), as well as assigning the accountable county. Additionally, Hepatitis labs received in PHRED from 5/9/18 to 6/25/18 will be imported into WDRS by DOH.

These daily-imported labs will create open cases in WDRS that can be found and reviewed through various workflows. PHRED will remain operational, but labs do not need to be printed from PHRED and manually entered into WDRS. The daily import of PHRED labs will continue until the launch of the DRIVE system (Disease Reporting Interoperability and Verification Engine), anticipated in December 2018. DRIVE will transform lab data to make it align with WDRS. This transformation makes high-level decisions such as which product code it belongs to and general standardized lab results. DRIVE will create a new lab result populating available fields. Fields starting with WDRS will be populated by DRIVE. A lab result created will display more fields than manually entered results.

Manually Entered Lab Results

Local health jurisdictions may receive a laboratory report directly through fax, mail or telephone. Each program area in WDRS has a customized lab template for manually entering lab results.

For a new result entry, select the **Lab Results Tab**. Click on 'Add Lab Result'.

Labs						
Lab No.	Specimen collection date	WDRS specimen type	WDRS test performed	WDRS test result	WDRS test result (additional)	WDRS interpretation code

Buttons: Add Lab Result, Update Lab Result

When the template opens, the Lab number is assigned automatically. The Lab number can repeat if more than one result is reported for a specimen.

General Lab Notes:

- Refer to the General Manual terminology for fields with a search icon (magnifying glass).
- Some drop-down lists in the template are the same for all conditions in a particular program area (e.g., WDRS specimen type, WDRS specimen source site, WDRS units of measure, WDRS interpretation code, WDRS result summary, Test result status). Other drop-down lists are condition-specific (e.g., WDRS test performed, WDRS test result-coded).
- Fields marked with an * are of high importance along with the required fields of each program area.

The following text (Sections 1-5) describes each section of the manual lab template and fields commonly found in them. Templates vary by each program area's model. Please refer to program area's model manual for required fields.

Section 1: Lab report information

Lab report information

Lab report reviewed - DOH

Lab report reviewed - LHJ

WDRS user-entered lab report note

Submitter  

If submitter is not on the pick list, please select "Laboratory not listed" and enter information below:

Lab not listed-specify

Performing lab for entire report  

If performing lab is not on the pick list, please select "Laboratory not listed" and enter information below:

Lab not listed-specify

Referring lab  

If referring lab is not on the pick list, please select "Laboratory not listed" and enter information below:

Lab not listed-specify

This section is completed once for the entire lab report. Fields included and field order vary by program area.

WDRS user-entered lab report note

This field is an optional open text note for the user.

WDRS report date

This field indicates the date the event is entered in to WDRS. If it is not populated and the date is unknown, populate it with the Specimen collection date

Lab report reviewed – DOH

This drop down indicates if the lab has been reviewed by DOH.

Lab report reviewed – LHJ

This drop down indicates if the lab has been reviewed by the LHJ. Some program areas may require this field to be completed and have workflows that trigger off of it. Check with the individual models for guidance.

Submitter

The submitter is the entity that submitted the lab report. This may or may not be the laboratory that performed the test. Select the search icon and use the wildcard function with the first few letters of the lab name followed by an asterisk(*). Click on the correct laboratory and hit Select. If the performing laboratory is not on the pick list, select 'Laboratory not listed' (lab*) and specify the laboratory in the field 'Lab not listed-specify'

Performing lab for entire report

Input the laboratory that performed the test. Select the search icon and use the wildcard function with the first few letters of the lab name followed by an asterisk(*). Click on the correct laboratory and hit Select. If the performing laboratory is not on the pick list, select 'Laboratory not listed' (laboratory*) and specify the laboratory in the field 'Lab not listed-specify'.

The Performing laboratory is needed if a result needs to be tracked or confirmed.

Referring lab

The referring laboratory is the laboratory that forwards a specimen to another laboratory for testing. If applicable, input the laboratory using the search icon and wildcard function with the first few letters of the lab name followed by an asterisk(*). Click on the correct laboratory and hit Select. If the referring laboratory is not on the pick list, select 'Laboratory not listed' (laboratory*) and specify the laboratory in the field 'Lab not listed-specify'.

Section 2: Specimen

Specimen	
Specimen identifier/accession number	<input type="text"/>
Specimen collection date*	<input type="text" value="MM/DD/YYYY"/> 
Specimen received date	<input type="text" value="MM/DD/YYYY"/> 
WDRS specimen reject reason	<input type="text"/>
WDRS specimen reject reason-Other, specify	<input type="text"/>

Each specimen and performing laboratory combination is entered as a separate lab result. The user can enter one or more results for each specimen and laboratory. For example, a bacterial culture done on a stool specimen could have results for one or more organisms (and results can be positive or negative results).

Specimen identifier/accession number

The specimen identifier or accession number is the laboratory's unique identifier for the specimen, not for the result. The Specimen identifier and the Performing laboratory are needed to track a result. These are a required field for all program areas.

Specimen collection date

Enter this field for every result when available. Otherwise enter the Received date or Date/time of analysis in their respective fields. If onset date is missing, specimen collection date may be the only date available for an event. This is a required field for all program areas.

Specimen received date

Enter the date the performing laboratory marked the specimen as received. This date is optional if the collection date is entered.

WDRS specimen type

The WDRS specimen type field has model-specific drop-down lists for all conditions (e.g. any GCD event will provide the same GCD list of specimen types while any Lead event will provide another list of specimen types). Not all choices in the list may be applicable for a given condition.

For GCDs, the most commonly used specimen types are: blood, CSF, isolate, nasopharyngeal swab, serum, sputum, stool, swab, and urine. The type of specimen may be important for a case definition (e.g., isolate must be for a specimen type from a normally sterile site such as CSF). For fluid, swab, or tissue, also provide a WDRS specimen source site.

WDRS specimen source site

The WDRS specimen source site is the body location site where the specimen was taken such as an abscess or organ. The specimen source field has model-specific drop-down list for all conditions. Not all choices in the list will be applicable for a given condition. The specimen source field may not be pertinent for all conditions. An entry is not necessary if the WDRS specimen type indicates the source (e.g., blood, CSF, NP swab, pleural fluid, sputum, stool or urine).

Specimen source should be given if the specimen type is fluid, swab, or tissue. If the WDRS specimen type includes '(specify source)' or is an isolate, a specimen source should be entered to indicate the part of the body that was tested (e.g., indicate if the source is a normally sterile site).

WDRS specimen reject reason

This is an optional field if the LHJ wants to document the reason a specimen was not tested, such as broken container or missing patient identifiers. If 'Other' is selected for WDRS specimen rejection reason, specify it in the text box.

Section 3: Test performed and result

This section is repeatable for all tests done on the same specimen.

Test performed and result	
WDRS test performed*	<input type="text"/>
Test performed-Other, specify	<input type="text"/>
WDRS test result, coded	<input type="text"/>
WDRS test result, comparator	<input type="text"/>
WDRS result, numeric only	<input type="text"/>
WDRS units of measure	<input type="text"/>
Reference range	<input type="text"/>
WDRS interpretation code	<input type="text"/>
Interpretation code-Other, specify	<input type="text"/>
Test result-Other, specify	<input type="text"/>
WDRS result summary*	<input type="text"/>
Test result status	<input type="text"/>
Result date	<input type="text" value="MM/DD/YYYY"/> <input type="button" value="📅"/>
WDRS performing organization	<input type="text"/> <input type="button" value="🔍"/> <input type="button" value="🗑️"/>
If performing organization is not on the pick list, please enter information below.*	
Performing organization name	<input type="text"/>
<input type="button" value="Add"/>	

WDRS test performed

The WDRS test performed is a drop-down list with condition-specific choices. If the test performed is not listed, select 'Other' and specify the test in the field 'Test performed – Other, specify'.

WDRS test result, coded

The WDRS test result, coded, is a drop-down list with test-specific and condition-specific choices. Examples:

- Selecting WDRS test result, coded, for **Hepatitis B core antigen IgM (anti-HBc IgM)** gives the result choices of: Negative, Negative/Nonreactive, No result, Not reportable, Positive, Positive/Reactive.
- Selecting WDRS test result, coded, for **Hepatitis C genotype** gives the result choices of: Negative, Not Reportable, Positive, and a list of HCV genotypes (1 and 1a through 6 and 6c).
- Selecting WDRS test result, coded, for **Salmonella** provides an extensive drop-down list of serotypes (e.g., Typhimurium, Enteritidis, Newport)
- Selecting WDRS test result, coded, for **child Lead report** gives the result choices of: Test result less than 5 ug/dL or Test result greater than or equal to 5 ug/dL.

WDRS test result, comparator

These fields both display a list of comparators for entering numeric results. The comparator gives the mathematical symbol for the test result: less than, less than or equal, equal, greater than or equal, greater than and 1:# (dilution) such as 1:256.

WDRS test result, numeric only

The numeric field is the value of the result, which should only include numeric values (i.e. integer or decimal).

WDRS units of measure

Indicate the units of measure for all numeric results.

Reference range

If appropriate, record the reference range of the test performed, which may be qualitative (e.g., “undetected”) or quantitative (e.g., “0.0-0.9”, “<15”, or “<3.3”).

Test method

The test method is an optional text field for more information about the type of test done.

WDRS interpretation code

The WDRS interpretation code is a drop-down list that can be used for optional interpretation of a WDRS result summary.

For GCDs this field is most commonly a complete blood count or an antibiotic resistance report. This field is not used for auto-classification. Commonly used codes will be Abnormal (applies to non-numerical results), Abnormal result, Normal (applies to non-numeric results), Normal (applies to non-numeric results), Normal result, Resistant, and Sensitive.

If ‘Other’ is selected, specify it in the ‘Interpretation code-Other,’ specify text box.

Test result –Other, specify

This optional text box is available for any result that cannot be reported through the fields in the Test performed and result section.

WDRS result summary

Enter a WDRS results summary for every report.

For GCDs this field is used with auto-classification. The result summary field has the same drop-down list for all GCD conditions. The options are: Equivocal, Indeterminate, Negative, Test not performed, and Positive.

For Hepatitis, this field is used for auto-classification. The dropdown options are the same for all test types: Positive, Negative, Indeterminate, Test not performed, Pending, Not reportable, and No result.

Test result status

The test result status field can be used to indicate if the result is final, preliminary, a correction, cannot be obtained, or pending.

Result date

Enter the date the performing laboratory marked the result as completed.

WDRS performing organization

Select the search icon and use the wildcard function with the first few letters of the performing organization name followed by an asterisk(*). Click on the correct laboratory and hit Select. If the performing organization is not on the pick list, select 'Laboratory not listed' (lab*) and specify the laboratory in the field 'Lab not listed-specify'. If the performing organization is not on the pick list, specify the 'Performing organization name'.

The Lead lab template will also collect the address, phone number, and identifier of the performing organization.

Upload document

The screenshot shows a form with two text input fields: 'Performing organization phone number' and 'Performing organization identifier'. Below the first field is a blue 'Add' button. To the right of the second field is a blue 'Upload Document' button. Both the 'Add' and 'Upload Document' buttons are highlighted with red boxes.

Click 'Upload Document' to attach the laboratory report to the investigation (lab report) if required. Click Browse, navigate to the correct computer drive and select the file, enter a name for the file, and click Save. (Note: this will exit you from the lab report.) Only one document can be attached to a result. If the Upload Document option is not present, save the lab result and the option should appear upon reentry.

Add additional result

The 'Add' button allows entry of another result for the same specimen and the same performing laboratory. Otherwise, click Save and generate a new report for the specimen and another laboratory or for a different specimen.

Note: this is the end of the TB lab template.

Section 4: Ordering provider

Ordering provider	
WDRS ordering provider	<input type="text"/>  
If ordering provider is not on the pick list, please select "Provider not listed" and enter information below:	
Provider not listed-specify	<input type="text"/>

WDRS ordering provider

The WDRS ordering provider is the health care provider that ordered the laboratory test. Select the search icon and use the wildcard function with the first few letters of the ordering provider name followed by an asterisk(*). Click on the correct provider and hit Select. If the ordering provider is not listed, select 'Provider not listed' and specify the provider in the field 'Provider not listed- specify'.

Section 5: Ordering facility

Ordering facility	
WDRS ordering facility	<input type="text"/>  
If ordering facility is not on the pick list, please select "Facility not listed" and enter information below:	
Facility not listed-specify	<input type="text"/>

WDRS ordering facility

The WDRS ordering facility is the health care facility from which the laboratory test order originated. Select the search icon and use the wildcard function with the first few letters of the ordering facility name followed by an asterisk(*). Click on the correct facility and hit Select. If the ordering facility is not listed, select 'Facility not listed' (*facil*) and specify the facility in the field 'Facility not listed- specify'.

Select the 'Save' button and you will be brought back to **Lab Results Tab**.
