September, 1966

The Honorable Daniel J. Evans
Governor, The State of Washington
Olympia, Washington

Honorable Sir:

I have the pleasure of submitting the
Vital Statistics Summary Report of the State
Department of Health for the calendar year 1965.

The report presents vital statistics
data in narrative, graphic and tabular form for
use in public health, demographic and related
fields.

Respectfully submitted,

A handwritten signature in cursive script, appearing to read "Bernard Bucove".

Bernard Bucove, M.D., D.P.H.
State Director of Health

INTRODUCTION

This report presents data on livebirths, deaths, fetal deaths (stillbirths), marriages and divorces, for the calendar year 1965 and the estimated population for the State of Washington as of July 1, 1965. Most data are reported for the state as a whole, each county and each city of 10,000 population or more.

Vital statistics data included in this report are identified either as residence data or occurrence data. Residence data refer to vital events involving residents of the area regardless of where the vital events actually occurred. Occurrence data refer to vital events actually occurring in the area regardless of the place of residence of the person or persons involved. In general, data presented on a residence basis are more useful.

Certain additional data including data for cities of 2,500 to 10,000 population in 1960 are available in unpublished form in the files of the Public Health Statistics Section.

TABLE OF CONTENTS

	Page
Table 1A - Estimates of the Population of the State of Washington by Counties and Cities of 10,000 Population and over, July 1, 1965	1
Table 1B - Estimates of the Population of the State of Washington, by Age Group, by Sex, July 1, 1965	2
Table 1C - Conversion of Birthweight Groups in Grams to Pounds and Ounces	3

***Per 10,000 livebirths

1933 and prior are occurrence figures, also Infant Mortality 1938 and Fetal Deaths 1935 - 1938, all others are residence figures.

LIVEBIRTHS

The number of livebirths occurring in Washington in 1965 was 52,842 with 53,806 births to Washington residents. The resident birth rate for 1965 is 17.4, lowest since 1941 rate of 17.0.

Table 2 lists the number of births from 1915 through 1965 with rates per 1,000 population. These data are presented graphically on pages XI and XIII. From these figures it can be observed that, generally speaking, there have been four distinct periods: The first - with a generally declining birth rate to a low rate in 1933 of 12.9 per 1,000 population. The second - with a rapidly rising rate culminating in the fluctuating period after World War II with a high rate in 1947 of 26.4. The third period - with a relatively stable but high rate of approximately 24 per 1,000 which changed in 1957 or 1958 into the fourth period - with steadily declining rates evidenced through 1965.

The county showing the highest resident birth rate for 1965 was Island with 22.3 per 1,000 population. The county showing the lowest resident birth rate was Garfield with 9.4 per 1,000 population. Residence and occurrence births for 1965 with rates per 1,000 population are given in Table 4 on page 10 of this summary.

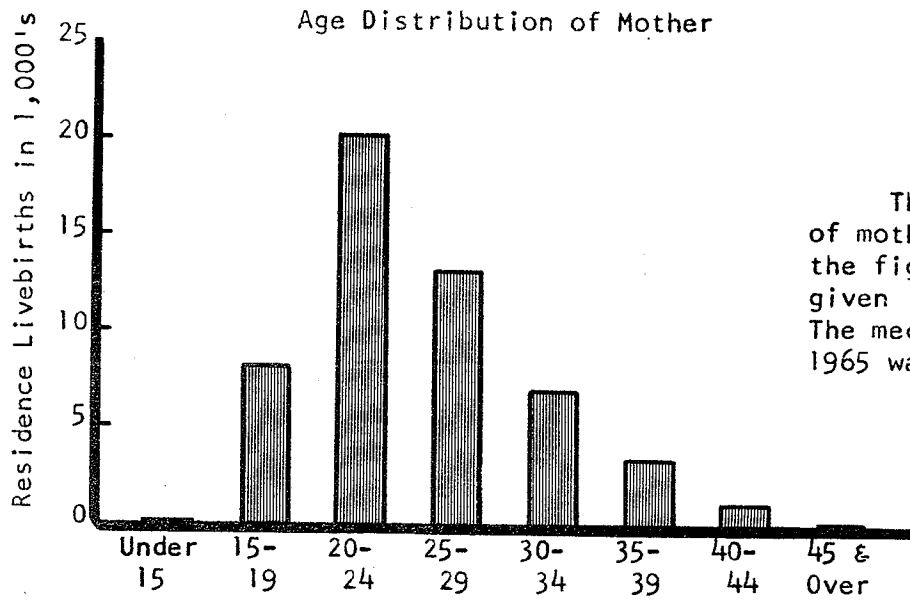

Of the total residence livebirths, 93.4 percent were classified as White, with 3.0 percent as Negro, 1.8 percent as Indian and the balance as Oriental or Other. County data by race are given in Table 5, page 12.

Of the livebirths by occurrence, 99.5 percent were born in hospitals or maternity homes. Occurrence data by type of institution of birth, are given in Table 7, page 16. The sex ratio of residence livebirths was 104 males per every 100 females.

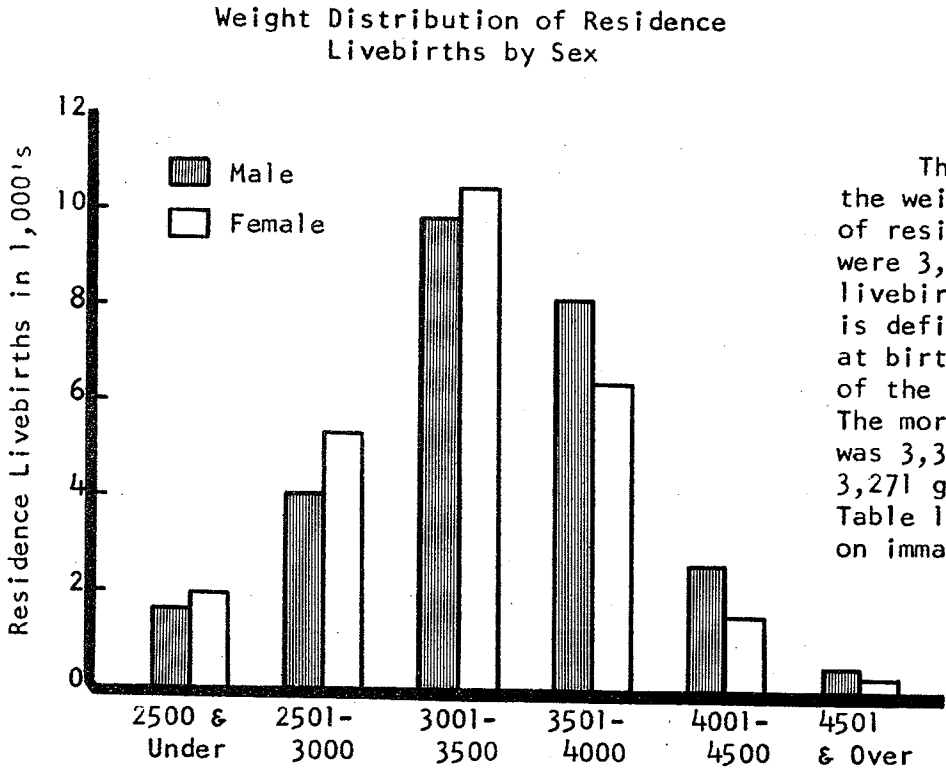

In regard to the order of birth, more livebirths were the first child of the family than the second or third. Of the residence livebirths, 32.0% were the first child in the family, 25.5% the second child and 17.5% the third child born to the family. The order of livebirth to mother is illustrated in the Figure on the left and is presented in tabulated form in the birth summary table on page 8.

A total of 469 sets of twins were born in 1965. Of these, 454 sets of twins were born in which both were liveborn and 15 sets with one child listed as a fetal death. In addition to these, 6 sets of triplets were born. In every case all three were liveborn. The county and city breakdown of multiple births is given in Table 9, page 20.

The distribution of age of mothers is illustrated in the figure to the left and is given in Table 6 on page 14. The median age of mothers in 1965 was 23.4 years.

There were 3,319 resident illegitimate livebirths during 1965. This is a ratio of 62.9 per 1,000 resident livebirths. The number of illegitimate livebirths occurring in 1965 was 3,370, for a ratio of 63.8 per 1,000 occurrence livebirths. Each of these rates have increased approximately 10 illegitimate livebirths per 1,000 births from the comparable 1964 ratios. The median age of mothers of illegitimate children born in 1965 is 19.5 years. Table 9, page 20, contains data on illegitimate livebirths by county and city of residence and occurrence.

The figure at the left gives the weight distribution, in grams of residence livebirths. There were 3,637 immature residence livebirths in 1965. (Immaturity is defined as 2,500 grams or less at birth). This is 6.9 percent of the total residence livebirths. The more median weight of males was 3,386 grams, compared to 3,271 grams for female livebirths. Table 12, page 24, gives the data on immaturity by county and city.

Pages 8 through 28 contain other data on livebirths for Washington during the year, 1965.

TABLE 3

LIVEBIRTHS: SUMMARY, 1965

A. Livebirths: Residence, by Race, by Sex				B. Livebirths: Residence, by Age Group of Mother, by Sex			
Race	Total	Male	Female	Age Group	Total	Male	Female
All Races	52,806	26,844	25,962	Total	52,806	26,844	25,962
White	49,332	25,093	24,239	Und. 15	50	24	26
Negro	1,574	808	766	15 - 19	8,212	4,172	4,040
Indian	969	487	482	20 - 24	20,180	10,318	9,862
Japanese	336	169	167	25 - 29	13,167	6,667	6,500
Chinese	129	65	64	30 - 34	6,819	3,488	3,331
Other	466	222	244	35 - 39	3,300	1,645	1,655
				40 - 44	1,018	501	517

MORTALITY

General

There were 27,379 deaths of Washington residents in 1965 for a rate of 9.0 per 1,000 estimated population. Deaths occurred in Washington at a rate of 9.1 per 1,000 estimated population with a total number of deaths occurring of 27,588. San Juan County had the highest residence death rate with a rate of 16.2 per 1,000 population. The lowest death rate was shown by Benton County with a rate of 5.3 per 1,000 population.

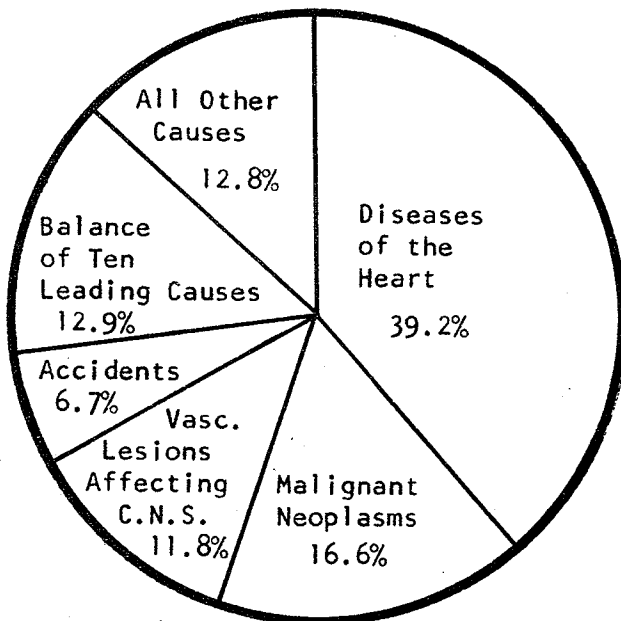

The sex ratio for residence deaths in 1965 was 140.8 male deaths for every 100 female deaths. Of the male deaths, 56.0 percent were married at the time of death and only 17.9 were widowers. Female deaths included 33.1 percent married women and 51.9 percent widowed. Median age of males dying was 69 and the median age at death of females was 75. The white race accounted for 96.8 percent of the total number of deaths.

General mortality data are given in death summary Tables 15, 16, 17, 18, and 19, pages 31 through 41 and Tables 20 through 30 contain more detailed data.

Selected Causes

Table 16, page 33 gives selected causes of death arranged according to the cause of death code as determined by the International Statistical Classification of Causes of Death. The death summary table also lists the ten leading causes of death according to rank. Diseases of the heart accounted for 39.2 percent of the total number of deaths of the State residents in 1965 with a rate of 353.1 per 100,000 population. Diseases of the heart has been the leading cause of death in Washington since 1913 with the exception of pneumonia in 1918.

Distribution of 1965 Deaths by Cause

Tuberculosis was a leading cause of death before 1913, but since 1952 tuberculosis no longer ranked as one of the ten leading causes. Malignant neoplasms and vascular lesions affecting the central nervous system have been the second and third leading causes of death since the early 1920's.

MORTALITY (Cont'd)

The fourth leading cause "All Accidents" was the leading cause of death at ages 1 through 34, accounting for 49.2 percent of all deaths to that age group. Diseases of early infancy were the leading cause of death at age under 1 year, accounting for 58.5 percent of all infant deaths.

Table 19, page 39 lists the leading causes of death in each five year age group for each sex with a percentage that each comprises of the total in each age group.

Causes of death of special interest, though not necessarily leading causes, are given by county and city with rates per 100,000 population in Table 25, pages 52 to 57.

Deaths from infective and parasitic diseases, including tuberculosis, are given in Table 29, page 66.

Accidental deaths by leading causes, and by place of accident are given in Table 26, page 58.

Homicides and Suicides by county and city of residence and occurrence are given in Table 28, page 64.

There were 15 maternal deaths in Washington in 1965. Data on maternal deaths are given in Table 30, pages 68 and 69.

*Primary cause of death was due to some cause not related to pregnancy, but with mention of pregnancy on the death certificate.

FETAL DEATHS

(Stillbirths)

For purposes of Washington State Vital Statistics registration, a fetal death is defined as a delivery after at least twenty weeks of gestation in which the fetus shows no evidence of life. There are indications that a number of fetal deaths within the scope of this definition are not registered.

A total of 639 residence fetal deaths were recorded in 1965 for a ratio of 12.1 fetal deaths for each 1,000 residence livebirths. During 1965, 643 fetal deaths occurred in the State of Washington, a ratio of 12.2 per 1,000 occurrence livebirths. These ratios continue the long term downward trend. (See graph on page XII)

Among the causes of fetal death, placental and cord conditions accounted for 39.6 percent of all residence fetal deaths. Table 32 on page 73 gives further data on residence fetal death by causes.

There were 110.4 male fetal deaths for each 100 female fetal deaths. Fetal deaths by county and city of residence and by county and city of occurrence with ratios per 1,000 livebirths are given in Tables 33 and 34 on pages 74 and 76.

INFANT DEATHS

Infant deaths (deaths of infants under one year of age) amounted to 1,130 or 4.2% of the total number of residence deaths in 1965. As can be seen on the graph on page XII, the infant mortality rate has experienced a downward trend since 1915. The 1965 residence infant death rate of 21.5 per 1,000 livebirths continues this trend.

Of residence infant deaths in 1965, there was a ratio of 130.6 male deaths for every 100 female deaths. In 1964, this ratio was 148.9 males to every 100 females. This represents a male infant death rate for 1965 of 23.8 deaths per 1,000 male livebirths and a female infant death rate of 18.8 per 1,000 female livebirths.

In 1965, 661 or 58.5% of the infant deaths were classified in the grouping "Certain Diseases of Early Infancy". Of this group, immaturity mentioned with some other condition and immaturity unqualified accounted for 486 deaths. These 486 deaths accounted for 43.0 percent of all infant deaths. Congenital malformations accounted for 15.9 percent of the infant deaths followed by influenza and pneumonia which caused 6.9 percent of the infant deaths (not including pneumonia of the newborn which is included in the category "Certain Diseases of Early Infancy"). Accidents caused 4.0 percent of the infant deaths.

Indians again showed the highest infant death rate, 50.6 per 1,000 livebirths. This compares with a rate of 21.4 per 1,000 livebirths for all races combined. The graph below shows infant death rates by race. Table 36, page 80, gives infant deaths by race, by county and city of residence.

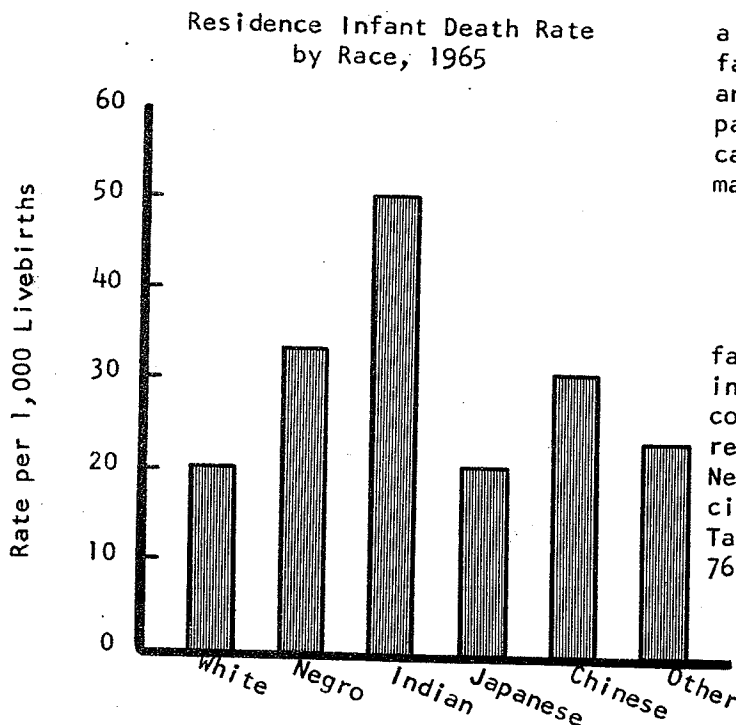

Table 37, page 82, gives a detailed breakdown of infant deaths by cause, sex, and age of infant. Table 35, page 78, lists the leading causes for the counties and major cities.

Neonatal Deaths

Neonatal deaths (infants who died before reaching the age of 28 days) accounted for 70.9% of the total resident infant deaths for 1965. Neonatal death data by county and city of occurrence are given in Tables 33 and 34, pages 74 and 76.

TABLE 31

FETAL DEATHS: RESIDENCE, BY SEX, BY WEIGHT IN GRAMS, 1965

Weight	Total	Male	Female	Sex Unknown
STATE TOTAL	639	330	299	10

*Estimated number of marriages performed - 30,564. (Based on 34 counties reporting both marriage licenses issued and marriages performed.)

**Estimated number of annulments granted - 111. (Based on 36 counties reporting both divorces granted and annulments granted separately.)

***King County figure obtained from the King County Prosecuting Attorney's office and does not include contested divorce and annulment decrees granted. Hence, the figure is at least a few hundred less than the actual number of decrees granted. No definite data are available on which to base an estimate of the number of contested divorce and annulments granted in King County.

The data on marriage and divorce were supplied by the County Auditors and the County Clerks of the various counties, with the exception of King County. (See note above.) Marriage and divorce records are not maintained in the State Vital Statistics office.
